

Equipment that makes things work in a high volume spay/neuter clinic may be helpful to a PPP that has the capacity to grow.

A second anesthesia machine, a folding table for a second surgery table, extra surgical instruments called “packs” and a medical field sterilizer may be desirable. Local fund raising may do the trick.

**Helpful equipment if program is growing:**

Anesthesia machine, circuits, etc	\$2500.00
Surgical packs (instruments), five to seven packs	\$1500.00
Medical field sterilizer	\$800.00
<b>Total</b>	<b>\$4800.00</b>

Providing the clinic with a plastic tub for supplies for the program helps make this into a convenient program in a box. If the clinic is providing more than five surgeries in one day, check-in can get hectic; including clipboards, pens, paper clips, etc., is helpful. The tub will contain the pre-printed forms, aftercare forms, any other information or paperwork that is provided by the humane organization.
